CT Loggers™

Time-Of-Use (TOU)

**TOU NSN
Accessories**

CT Loggers™ use a current transformer that clips over the monitored wire to record the time-of-use or run-time by detecting the current draw of hot water heaters, air conditioners, heat pumps, fans, commercial motors, pumps, and virtually any other electrical device.

The CT Logger™ monitors devices with over 1/4 amp current draw.

CT Logger™ comes with a 150 Amp CT and have a built-in sensitivity adjustment giving you the option to monitor only the high power draw components of the metered device.

Time-Of-Use (TOU) SmartLoggers™ detect the actual time a device turns on and off. The on/off transition times are stored in the logger and the data is retrieved using the TOU SmartWare™ software.

Optional larger 500 Amp CTs are available for monitoring larger loads.

Run-Time (RTC) CT Logger
