

Recycling Information

FULL CIRCLE, INC.

An Environmental Technologies Company

Full Circle is the oldest and most experienced ballast recycling company in the United States. In the past year, the company's services have expanded to include lamp recycling, and recycling and disposal of PCB oil, transformers, and capacitors.

Ballast Recycling Benefits

- * Costs 30-50% less than whole ballast incineration.
- * Requires less fuel and energy resources than whole ballast incineration, due to the energy-intensive process required to incinerate a ballast composed largely of metal.
- * Preserves virgin metal resources by providing usable sources of uncontaminated metals for recycling.
- * Conserves landfill space by incinerating hazardous components and reusing the rest of the ballast, rather than storing whole ballasts in a landfill.
- * Results in the production of much less ash and air pollution than whole ballast incineration.
- * Ensures thermal destruction of PCB's, eliminating the Superfund liability associated with landfilled ballasts.

Full Circle's recycling and disposal services for fluorescent and HID lamps include:

- * Customized manifests and labels
- * Transportation and containers
- * Recycling of uncontaminated glass and aluminum components
- * Capture and reuse of mercury components
- * Computerized material tracking
- * Certificate of Recycling and Disposal
