

Self Luminous Exit Signs

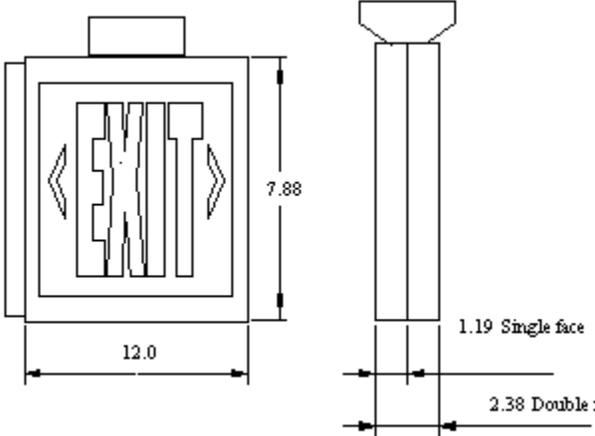

Series 700 Omni-Glo Self-Luminous Exit Signs

There are no electrical connections, no batteries, no wires, nothing but self-powered luminescent tubes. The signs are waterproof, explosion and spark-proof and suitable for hazardous locations. At full brightness they can be seen from a distance of at least 125 feet in the dark. Minimum illumination at the end of their guaranteed life is 100 feet. Since their life is a function of the amount of tritium gas in the tubes, they can be ordered in 10-year, 12, 15 and 20-year versions.

Signs have flame-resistant high impact black plastic housings and clear acrylic faces. Standard letter color is green. Face color is red. Other colors and combinations are available on special order. Standard letter size is 6" H x 2" W. and stroke width of 3/4", with universal arrows.
