

Full Spectrum Natural Bulbs

UV Coated Full Spectrum Tubes

Accurate Lighting for Museums, Art Galleries, Archives, and Document Preservation

Verilux UVX fluorescent tubes deliver highly accurate color rendering and visual clarity without the harmful effects of ultraviolet radiation that is emitted by ordinary fluorescent lighting. UV light is virtually eliminated due to our unique Dupont Surlyn® coating that blocks the ultraviolet light up to 388 nanometers.

Verilux UVX series fluorescent tubes define a standard of quality and excellence wherever UV filtered accurate lighting is required. The superior performance is a result of our advanced phosphor technology. Our custom blending of four rare phosphors replicates the balanced full spectrum of natural light while showing objects clearly and without distortion.

Verilux UVX full spectrum tubes are available in most popular sizes, wattages and colors.
